

Go green, young man, and grow up with the world

October 7, 2014 by John-Thomas Didymus

[...]

A recent report by [Bloomberg New Energy Finance](#) acknowledges hurdles along the way; the major being that while investors are looking to move investments from fossil fuels based on long term projections of the prospects of clean energy stocks, they are currently not comparable to oil and gas stocks in terms of liquidity and risk-return profile.

Although, clean energy stocks have performed fairly well since 2013, with the [WilderHill New Energy Global Innovation Index \(NEX\)](#) that tracks a selection of clean energy companies worldwide [rising sharply](#), they are still not yet sufficiently attractive alternative to oil and gas stocks.

[...]
