## In 10 Years Josh Landess Will Be Clean Energy's Warren Buffett. Investors Should Get to Know His Research Now

Everyone knows the legend of Warren Buffett. EnergyTechStocks.com believes that 10 years from now, Josh Landess will be clean energy's investing legend.

Landess co-manages an index, not a fund, a distinct advantage for investors in this age of Wall Street scandals. As co-manager of the Wilderhill New Energy Global Innovation Index, Landess probably is not only the most thorough source of information on clean energy stocks but also the most objective. That he almost never speaks with the media is another plus because it shows he isn't inclined to tout a stock the way virtually every TV talking head routinely does.

Landess is as green as Al Gore. He scours the world for intriguing firms, keeping track of over 500 companies at any one time. The Wilderhill New Energy Global Innovation Index includes nearly 90 outfits traded on two dozen different stock exchanges. (Only Rafael Coven's Cleantech Index comes close in scope and diversification.) Approximately a third of the components in Landess's index are located in the Americas, with another third in Europe, the Middle and Africa, and the remainder in Asia and Oceania.

Make no mistake: accessing Landess's brain will be no guarantee of investor success in clean energy, especially over the next couple years, when the global recession could be a nightmare for green project developers. Inevitably, however, a "carbon-constrained" world will arrive – the combined result of dwindling fossil fuel supplies and concern about both climate change and nations' security. It will usher in unprecedented opportunity to make money, but it will take a guide like Landess to navigate clean energy's numerous sub sectors.

A superficial examination indicates that energy efficiency and wind power are the sub sectors Landess is betting on most, with each accounting for

slightly more than 25% of the index's total holdings as of Dec. 29. But look deeper and you discover that Landess has actually tapped into all of the critical technology that will be needed to support the sort of green energy economy President-elect Barack Obama envisions for the world.

....

If, as an investor, you share experts' belief that energy, the world's last analog industry, is about to go digital, with new technology saving money, resources and the planet's air quality, then you share EnergyTechStocks's belief that Josh Landess will become known as clean energy's investing legend.
